

Power failure

If the power goes off when an appliance is plugged in or the ceiling light is turned on, unplug it or switch it off.

Then switch on the relay in the fuse box, maybe change the fuse, and then contact the caretaker by mail.

(Don't turn on the same thing again)

The caretaker will then repair the fault during normal working hours.

Unnecessary calls to electrician outside normal working hours will be charged to caller.

The amount will usually be from DKK 4000 upwards.

The Caretaker.
